Jakarta Barat, DKI Jakarta, 11480

DevOps-oriented Software Engineer with around two years of hands-on experience in backend development and infrastructure management. Experienced in building and deploying applications using **Rust/Node.js (TypeScript)**, managing relational databases, and working with both local and cloud environments (**VPS, AWS EC2, GCP**). Familiar with **Docker, CI/CD pipelines**, and **system monitoring**, with a focus on improving deployment processes and maintaining system reliability. Interested in continuously developing skills in DevOps practices to build scalable and maintainable systems.

Skills :

Adaptive, Communicative, Innovative, Tenacious, Critical Thinker

Hard Skills :

Rust, Node.js, PostgreSQL, Linux, Docker, Kubernetes, Terraform, GCP, AWS, Grafana

EDUCATION

Mercu Buana University

Jakarta Barat, DKI Jakarta

Bachelor Degree in Informatics | GPA : 3,51

2021-2025

Organizational Experiences :

Mercu Buana Student Choir - Organizational-based student choir with around 60-70 members with varied backgrounds. Held two big choir concerts every year and have joined national and international competitions.

Vice President :

Sept 2023 - Aug 2024

1. Take on the role of Chairman in his/her absence situations to lead meetings, make decisions, and maintain the operational.
2. Collaborate with relevant divisions in achieving organizational goals.

Bangkit Academy led by Google, GoTo, & Traveloka

Jakarta Barat (Remote)

Machine Learning Cohort

Sept 2024 - Jan 2025

Bangkit is a career readiness program that aims to produce high-caliber technical talent for world-class Indonesian technology companies and startups, fully supported by Google, GoTo, Tokopedia, and Traveloka.

Techniques Specialization, and Generative Adversarial Networks Specialization

WORK EXPERIENCES

PT Global Innovation Technology

Technical Consultant/Software Engineer

Jakarta Pusat, DKI Jakarta, Indonesia

April 2025 - April 2026

Sentralpart.com

- Led backend development and DevOps for a multi-tenant web-based ERP system tailored for workshop (bengkel) operations
- Designed and implemented RESTful APIs using Express.js (TypeScript) and TypeORM
- Engineered and managed PostgreSQL database architecture for multi-tenant data handling
- Built core business modules including inventory, sales & purchase transactions, accounts receivable/payable, payroll, warehouse management, and financial reporting
- Deployed and maintained production environment on VPS using Docker, ensuring scalable and consistent deployments
- Implemented CI/CD pipelines for automated build and deployment workflows
- Established staging environment using local server with Docker and OpenVPN for safe testing and collaboration
- Collaborated in a team of 4 as Backend Lead, coordinating backend architecture and development decisions
- Delivered a digital solution for small-to-medium workshops, replacing manual operational processes with integrated system

IT Support

- Monitored performance of local and cloud servers (Windows Server, AWS EC2, Ubuntu, Windows Desktop) to ensure system reliability
- Performed routine checks on SQL Server database performance, identifying potential issues before impacting operations
- Supported preventive maintenance activities to minimize downtime and maintain system stability
